

Clockodo Auto-Fill — Guide

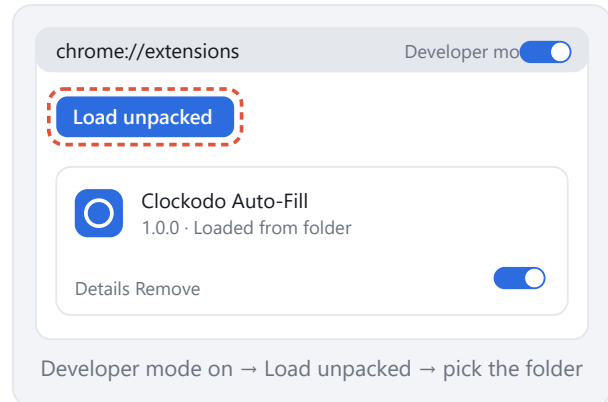

Fill your daily Clockodo times in one click, for a date range, or automatically every workday.

[Install](#)[Get API key](#)[Connect](#)[Customer & service](#)[Hours](#)[Auto-fill](#)[Daily use](#)[FAQ](#)

1 Install the extension

1. Unzip the download (or clone the repo) to a folder you will keep.
2. Open `chrome://extensions`.
3. Turn on **Developer mode** (top right).
4. Click **Load unpacked** and pick the folder.
5. Pin the icon from the puzzle-piece menu.

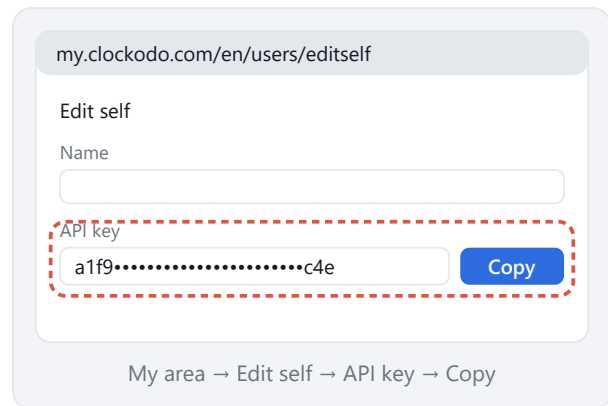

Don't delete or move the folder afterwards — Chrome loads the extension from there.

2 Get your personal API key

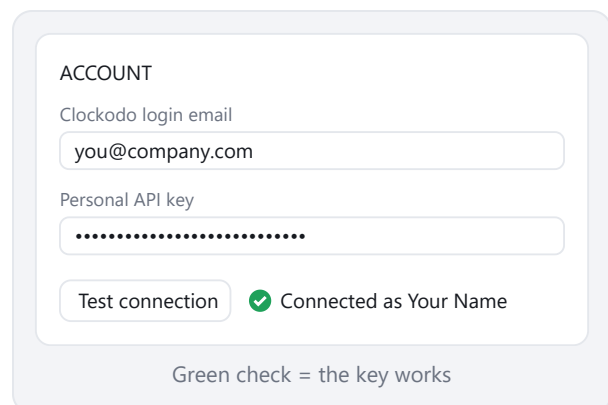

1. Sign in to Clockodo and open [My area](#) → [Edit self](#).
2. Find the **API key** section.
3. Copy the key (generate one if the field is empty).

This is **not** your password. The key stays in your browser's local storage and is sent only to `my.clockodo.com`. Every colleague uses their own key — nothing is shared.

3 Connect the extension

1. Click the extension icon → **Options**.
2. Enter your Clockodo login email and paste the API key.
3. Click **Test connection** — you should see your name with a green check.
4. Press **Save** in the top bar.

4 Choose customer & service

Clockodo books your attendance as **time entries**, so each entry needs a customer and a service (e.g. your internal company customer and a generic "Work" service).

1. In **What to book**, keep mode = *Time entries*.
2. Click **Load customers & services**.
3. Pick the customer and service your team uses for regular work.
4. Leave "billable" off unless told otherwise. **Save**.

Not sure which to pick? Open any existing entry in Clockodo and use the same customer/service shown there.

Service

Work (#88)

Load customers & services

Load once, then pick from the dropdowns

5 Set your working hours

Start with one block (default 09:00–17:00). Click + **Add block** to split the day — the gap between blocks is your break, e.g. 08:30–13:00 and 14:00–17:30.

- Pick your **Timezone** below the blocks. All times are wall-clock in that zone and DST-aware.
- The running total under the list shows hours per day.
- Keep **Skip weekends** on unless you actually work weekends.

08:00 13:00 14:00 18:00

08:30 – 13:00

break

14:00 – 17:30

Morning 4.5 h + break 1 h + afternoon 3.5 h
= 8 h attendance per workday

Two blocks, one break

6 Turn on automatic daily fill

1. In **Schedule**, set the time (default 09:15) and switch on **Auto-fill every workday**. Save.
2. Or toggle **Auto-fill daily** right from the popup.

How it behaves:

- At the set time, while Chrome is running, it fills today — unless it's a weekend, an opted-out day, or already filled.
- If Chrome was closed at that time, it **catches up** the next time Chrome starts (once per day).
- You get a notification only when something was created or failed. Silence = nothing to do.

09:15 · alarm

Weekend? Skipped?
Already filled?

no → create entries

time closed? runs on next launch

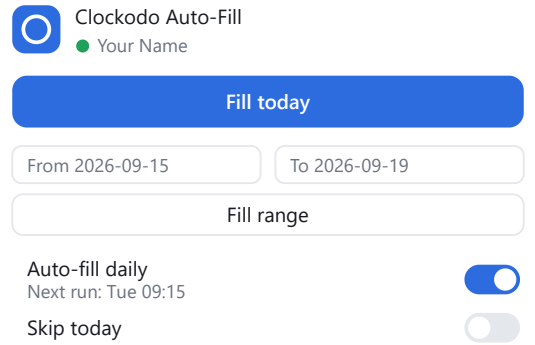

Checks first, books only when needed

The popup shows *Next run* and the result of the last automatic run.

7 Day-to-day use

- **Fill today** — one click. Shows *created*, *already filled*, or *skipped*.
- **Fill range** — pick From/To, fills every workday in between (great after vacation or a missed week).
- **Skip today** — mark today as a day that must not be filled (sick day, holiday). Manage the full list in Options.
- The dot next to your name is green when the API key works.

The screenshot shows the 'Clockodo Auto-Fill' popup. At the top, there's a header with the Clockodo logo and the text 'Clockodo Auto-Fill' and 'Your Name' with a green dot. Below this is a large blue button labeled 'Fill today'. Underneath are two input fields: 'From 2026-09-15' and 'To 2026-09-19'. Below these is a button labeled 'Fill range'. At the bottom, there are two toggle switches: 'Auto-fill daily' (which is turned on, showing 'Next run: Tue 09:15') and 'Skip today' (which is turned off).

Everything you need is in the popup

FAQ & troubleshooting

- ▶ "Not configured — open Options" in the popup
- ▶ "Entry mode needs a customer and a service"
- ▶ "Work times must match the day's entries"
- ▶ "already filled" but I see nothing in Clockodo
- ▶ Auto-fill didn't run at the set time
- ▶ Can I change the hours later?
- ▶ Is anything sent anywhere besides Clockodo?
