

Clockodo Auto-Fill — Guide v1.8.0

Fill your daily Clockodo times in one click, for a date range, or automatically every workday.

[Source on GitHub](#) · [Latest release](#) · [Report a problem](#)

What's new in 1.8.0

- **No more double bookings across devices** — each device now fires at its own small offset after your auto-fill time, and after booking it re-checks the day and withdraws its copy if another device booked the same slots first.
- **Duplicate check** — Options → Activity → Duplicate check scans a whole year for overlapping entries and lists the days; after each auto-fill the current month is checked and you get a notification if something is found.
- **Confirmation dialogs** redesigned (Replace, Clear log, sign-out) — themed, no more browser popups.
- **Public holidays are skipped** — read from your Clockodo holiday calendar (your federal state / country, set by your admin). No setup: Options → Schedule shows the calendar and the next holiday. Fails safe: if the calendar can't be loaded, nothing is booked.
- **Sign in/out clarity** — Account shows Ready/Not set up per card; a single Log in button when signed out, Sign out + Delete login data once connected. Optional session-only API key.
- **Activity log** — what the extension booked, replaced or failed, per day or per range, synced across your devices; CSV export.
- **Options in tabs** — Account · Schedule · Activity · Sync & updates · Help. Save writes all tabs; the last tab is remembered.
- **Sync & backup** — settings follow you to every Chrome you're signed into (API key only if you opt in); JSON export/import for everything else.
- **Random start, fixed duration** — schedule mode: exact daily total (e.g. 8 h 23 min), break ± variation, start window; fresh random times on every fill.
- **Conflict handling** — choose what happens when a day already has time entries: *Skip* (default) or *Replace* (delete that day's entries and book your blocks). Handy for cleaning up duplicates.
- **Update notice** — a banner and notification tell you when a newer version is available (opt-out in Options → Sync & updates → Updates).
- **Reliable duplicate check** — it now inspects your actual time entries for the day and never books when the check fails.
- **Security & privacy** section (below) and a published privacy policy.
- Fixes: legacy hours migration, DST-safe daily alarm, transactional multi-block booking, timezone edge cases.
- From 1.1.0: flexible working blocks with day timeline, your own timezone, auto-fill catch-up, customer & service picker, redesigned UI, this guide.

Full history: [CHANGELOG.md on GitHub](#).

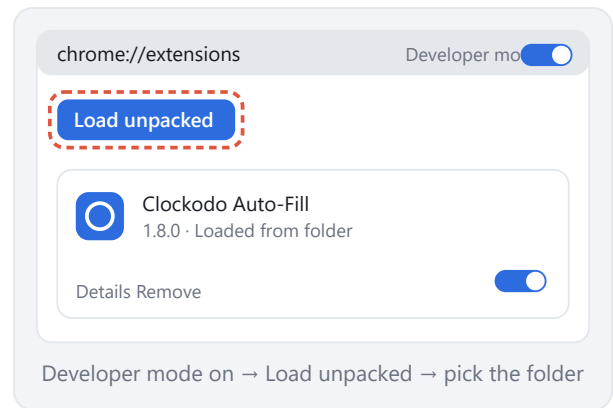

1 Install the extension

Recommended: [Chrome Web Store](#) → [Add to Chrome](#).
Updates arrive automatically.

Manual (load unpacked):

1. Unzip the download (or clone the repo) to a folder you will keep.
2. Open `chrome://extensions`.
3. Turn on **Developer mode** (top right).
4. Click **Load unpacked** and pick the folder.
5. Pin the icon from the puzzle-piece menu.

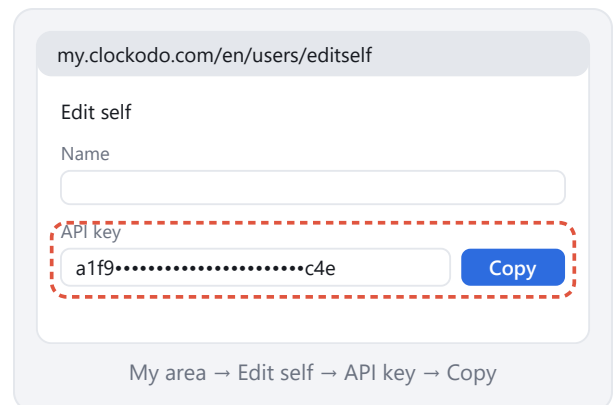

Manual installs: don't delete or move the folder afterwards — Chrome loads the extension from there.

2 Get your personal API key

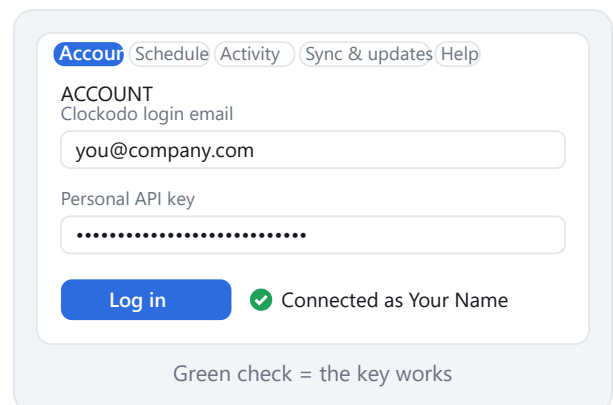

1. Sign in to Clockodo and open [My area](#) → [Edit self](#).
2. Find the **API key** section.
3. Copy the key (generate one if the field is empty).

This is **not** your password. The key stays in your browser's local storage and is sent only to `my.clockodo.com`. Options never displays it again (only *Saved · ends in ...xxxx*), and you can revoke it in Clockodo at any time. Every colleague uses their own key — nothing is shared.

3 Connect the extension

1. Click the extension icon → **Options** (tab *Account*).
2. Enter your Clockodo login email and paste the API key.
3. Click **Log in** — you should see your name with a green check.
4. Press **Save** in the top bar.

3b Account state & signing out

Options → Account tab. Cards that still need attention get a thin red edge and a badge (*Not set up*, *Not logged in*, *Pick customer & service*); the Account tab shows a small red dot until both cards are ready. Once connected, both turn *Ready* ✓.

- **Log in** — the only button shown while signed out. It tests the connection and resolves your Clockodo user.
- Once connected, **Sign out** and **Delete login data** replace it. **Sign out** only disconnects — your email and key stay saved, so signing back in is one click. **Delete login data** permanently removes email, key, user id, customer/service *and the activity log* from this device (and from synced settings, if the key was synced) — always asks for confirmation first.
- **Remember my API key on this device** (on by default) — turn off to keep the key only until Chrome closes (session storage, never on disk or synced); auto-fill then pauses after a restart until you log in again.

The screenshot shows the 'ACCOUNT' tab in the Clockodo app. At the top right, there is a 'Not set up' badge. Below the title, there are two input fields: 'Clockodo login email' and 'Personal API key'. A checkbox labeled 'Remember my API key on this device' is checked. A blue 'Log in' button is highlighted with a red dashed border. At the bottom, a message states 'Signed out: only "Log in" shows'.

4 Choose customer & service

Options → Account tab → What to book. Clockodo books your attendance as **time entries**, so each entry needs a customer and a service (e.g. your internal company customer and a generic "Work" service).

1. In **What to book**, keep mode = *Time entries*.
2. Click **Load customers & services**.
3. Pick the customer and service your team uses for regular work.
4. Leave "billable" off unless told otherwise. **Save**.

Not sure which to pick? Open any existing entry in Clockodo and use the same customer/service shown there.

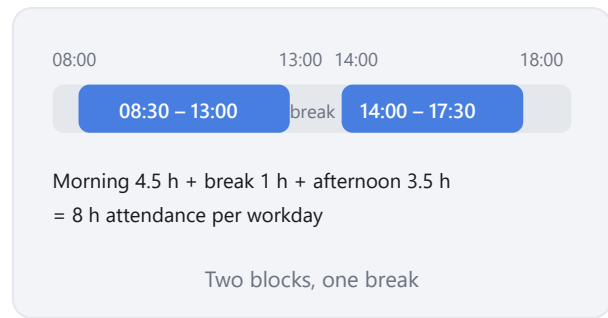

The screenshot shows the 'WHAT TO BOOK' section. At the top, there are tabs: 'Account' (selected), 'Schedule', 'Activity', 'Sync & updates', and 'Help'. Below the tabs, the 'Mode' is set to 'Time entries (recommended)'. There are two dropdown menus: 'Customer' with 'Internal (#1042)' selected, and 'Service' with 'Work (#88)' selected. A button labeled 'Load customers & services' is highlighted with a red dashed border. At the bottom, a message states 'Load once, then pick from the dropdowns'.

5 Set your working hours

Options → *Schedule tab*. **Fixed blocks:** start with one block (default 09:00–17:00). Click + **Add block** to split the day — the gap between blocks is your break, e.g. 08:30–13:00 and 14:00–17:30.

Random start, fixed duration: set the exact daily total (e.g. 8 h 23 min), a break with an optional $\pm$ variation, and a start window (e.g. 07:30–09:30). Every fill draws fresh values — start, break length and the morning/afternoon split — while the total stays exact. Running *Replace* again re-rolls the day. **Preview next days** shows sample results.

- Pick your **Timezone** below — click the field and type a city (e.g. "Berlin") to search; the card shows the current time and UTC offset there. All times are wall-clock in that zone and DST-aware.
- Keep **Skip weekends** on unless you actually work weekends.
- **Skip public holidays** (on by default) uses the holiday calendar your Clockodo admin assigned to you — e.g. *Sachsen-Anhalt* — including movable feasts like Easter Monday. The row shows the calendar, how many holidays this year and the next one. Half-day holidays count as workdays. If no calendar is assigned, ask your admin; the extension can't pick a state itself.

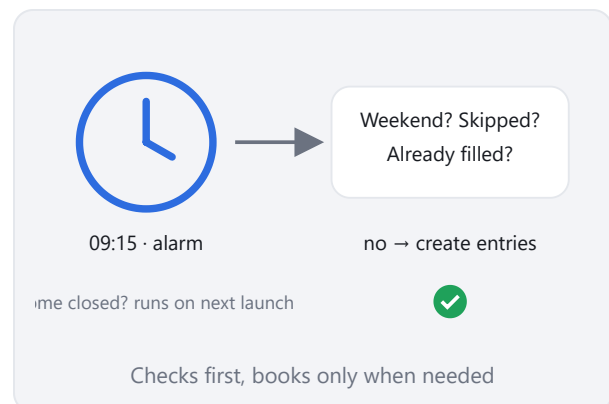

6 Turn on automatic daily fill

1. In **Options** → **Schedule tab** → **Schedule**, set the time (default 09:15) and switch on **Auto-fill every workday**. Save.

2. Or toggle **Auto-fill daily** right from the popup.

How it behaves:

- At the set time, while Chrome is running, it fills today — unless it's a weekend, an opted-out day, or already filled.
- If Chrome was closed at that time, it **catches up** the next time Chrome starts (once per day).
- You get a notification only when something was created or failed. Silence = nothing to do.

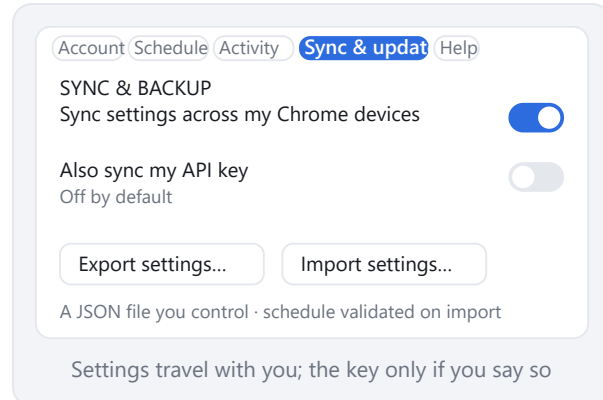

The popup shows *Next run* and the result of the last automatic run.

6b Sync & backup

Options → Sync & updates tab.

- **Sync settings across my Chrome devices** (on by default) — hours, schedule, skip days, timezone and customer/service follow your Chrome account. A new device only asks for the API key.
- **Also sync my API key** (off by default) — switch on and new devices need no re-entry; the key is then kept in your Google account like a saved password.
- **Export / Import** — a JSON file you control. Tick *include API key* only if the file stays private. Import validates the schedule, then reloads.

Sync needs Chrome Sync enabled in your browser. Company-managed profiles sometimes disable it — Export/Import works regardless.

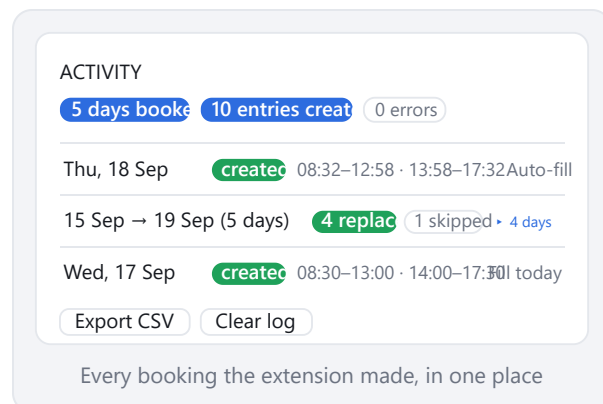

6c Activity log

Options → Activity tab (also via the popup footer).

- One row per **Fill today / Auto-fill** run: work day, result (*created, replaced, already filled, skipped, error*), the booked times, when it ran and on which device. Errors are collapsed behind a *details* toggle, closed by default.
- A **Fill range** run is one row — 15 Sep → 19 Sep (5 days) with a summary like *4 created · 1 skipped*; expand it to see each day.
- Repeated identical errors collapse into one row with $\times N$.
- Filter by month or errors only; the chips count days booked, entries created and errors.
- **Export CSV** (opens cleanly in Excel) · **Clear log** · rename this device.

Only the extension's own actions are logged — changes made directly in Clockodo don't appear here. The last 150 entries sync between your devices;

up to 1000 stay on this one. **Delete login data**
(Account tab) clears the whole log.

7 Day-to-day use

- **Fill today** — one click. Shows *created*, *already filled*, or *skipped*.
- **Fill range** — pick From/To (or tap *This week / Last week / This month*), fills every workday in between. The status line tells you the exact range it is booking; the result card then lists every day with its outcome and booked times.
- **If a day already has any time entry** — *Skip that day* (default, never touches existing bookings) or *Replace* (deletes all entries on those days and books your blocks — asks for confirmation; use it to clean up duplicates).
- **Skip today** — mark today as a day that must not be filled (sick day, holiday). Manage the full list in Options.
- **Activity** (footer link) — opens the log of everything the extension booked.
- The dot next to your name is green when the API key works.
- The footer shows your installed version and whether a newer one exists, plus the last automatic run.

The screenshot shows the 'Clockodo Auto-Fill' interface. At the top, there's a header with the extension's logo and the text 'Your Name'. Below this is a prominent blue button labeled 'Fill today'. Underneath the button are two input fields: 'From 2026-09-15' and 'To 2026-09-19'. Below these is a 'Fill range' button. Further down, there are two toggle switches: 'Auto-fill daily' (which is turned on, showing 'Next run: Tue 09:15') and 'Skip today' (which is turned off). At the bottom of the interface, a message states 'Everything you need is in the popup'.

Security & privacy — in plain words

- **Official API only.** The extension talks to Clockodo exclusively through its documented public REST API (<https://my.clockodo.com/api>), the same one Clockodo's own integrations use. No scraping, no automation of the website, no hidden endpoints.
- **Your data stays with you.** Your email, API key and settings are stored in the extension's storage inside *your* Chrome profile. There is no server behind this extension, no account, no analytics and no crash reporting. Settings can sync between your own devices through your Google account (Chrome Sync) — the API key **only if you switch that on**. Both switches: Options → Sync & updates → Sync & backup.
- **Only one destination for your data.** Every request carrying your credentials goes to `my.clockodo.com`, and only when you click Fill / Log in / Load or the scheduled fill runs. Besides booking, it only reads: your user record, customers, services, existing entries and your public-holiday calendar. The extension has no permission for any other website.
- **Optional update check.** Once a day it downloads one public file (the project's `manifest.json` on GitHub) to see if a newer version exists. That request contains no personal data at all. Turn it off in Options → Sync &

updates → Updates if you prefer.

- **API key, not password.** You never enter your Clockodo password. The personal API key can be regenerated in Clockodo at any time, which instantly invalidates the old one.
- **Sign out anytime.** Options → Account → *Sign out* just disconnects (email/key stay for next time); *Delete login data* wipes the login and the activity log from this device.
- **Nothing runs without Chrome.** There is no background service or cron job on your machine. The daily auto-fill is a Chrome alarm: it fires only while Chrome is running, and catches up on the next launch if it was missed.
- **Everyone uses their own key.** When you share the extension with colleagues, each person enters their own credentials. Nothing about your account is inside the shared files.
- **Open source.** Every line is readable at github.com/mohasoori/clockodo-autofill (MIT license); the privacy policy is [docs/PRIVACY.md](https://docs.clockodo.com/PRIVACY.md). You can inspect exactly what is sent — or remove the extension at any time; uninstalling deletes all stored data.

FAQ & troubleshooting

"Not configured — open Options" in the popup

Email or API key missing. Do steps 2–3.

"Entry mode needs a customer and a service"

Do step 4: Load customers & services, select both, Save.

"Work times must match the day's entries"

You're in change-request mode, but this Clockodo derives attendance from time entries. Switch mode to *Time entries*.

"already filled" but I see nothing in Clockodo

The extension found an existing working time for that date. Check the day in Clockodo's timetable / entries list — possibly an entry booked another way.

Auto-fill didn't run at the set time

Chrome must be running. If it was closed, it catches up the next time Chrome starts. Toggling the switch off and on also triggers an immediate catch-up when the time has passed.

Can I change the hours later?

Yes — Options → Schedule tab → Working hours → Save. Future fills use the new times; existing entries are not changed.

Is anything sent anywhere besides Clockodo?

No. Requests go from your browser straight to `my.clockodo.com` using your own API key. There is no server, analytics, or shared storage.
